AI Tool Prompt Engineering Report

1.) AI Tool Overview

Name of AI Tool: Google Gemini

Purpose/Domain: Image generation on the concept of Software Engineering

Why you chose it: I chose Gemini because based on my experiences in the past with it, it was always the most lightweight and fast in terms of generating output especially with images compared to other LLMS.

2.) Original Prompt

Your Initial Prompt:

generate me an image of what a software engineering looks like

Screenshot or copy of the output:

Here is a modern look at what software engineering involves, showing the combination of coding, system architecture, and collaboration required to build complex technology.

3.) AI-Assisted Prompt

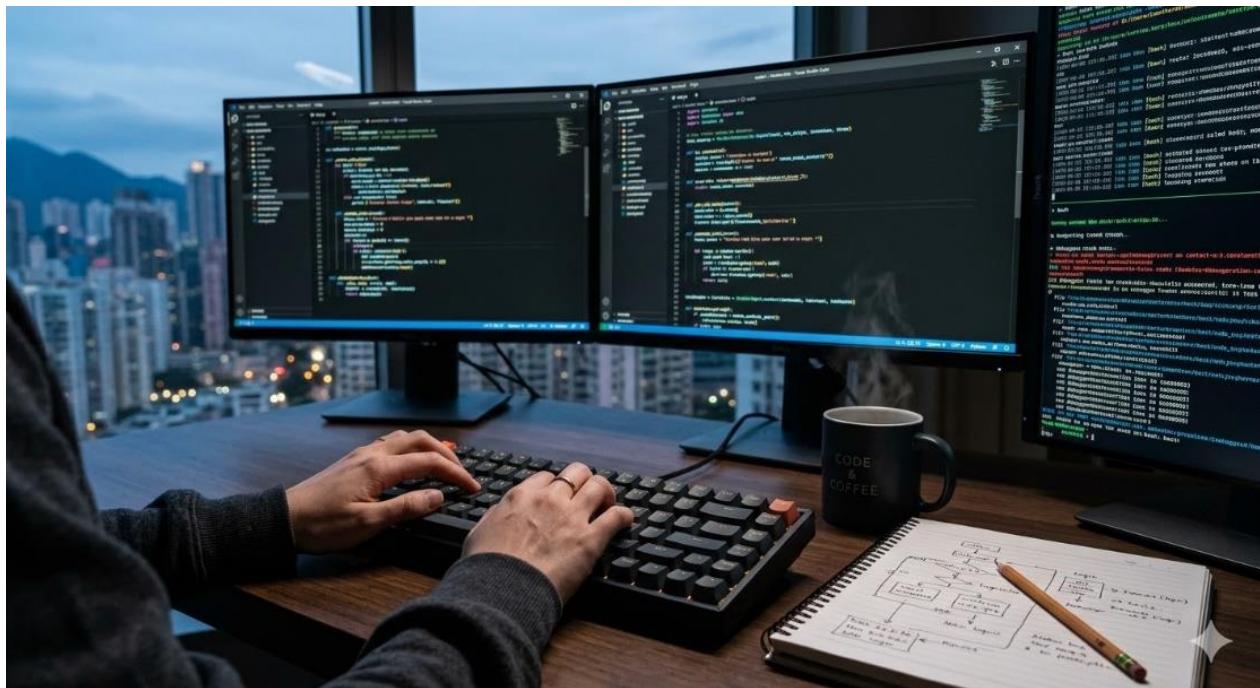

Which LLM you used (e.g., ChatGPT, Gemini, etc.): Google Gemini

Improved Prompt:

The Prompt:

A cinematic, photorealistic macro shot of a software engineer's hands typing on a high-end mechanical keyboard with subtle RGB backlighting. A shallow depth of field captures two ultra-wide monitors displaying lines of Python code in a dark-themed IDE (Visual Studio Code). To the side, a vertical monitor shows terminal logs and a debugger. A steaming ceramic mug sits next to an open notebook filled with handwritten flowcharts and a pencil. The setting is a quiet, dimly lit desk with ambient light from a window overlooking a city at dusk. 8k, hyper-realistic, detailed textures.

Screenshot or copy of the new output:

4.) Comparison and Analysis

For the most part, the original and the improved output aren't that far off in terms of quality. In my opinion, the improved output definitely captured the idea of my original prompt more, but the original output is still impressive. The improved prompt that was given was more specific and really nailed the idea. The improved prompt provided a much more structured and specific set of instructions, and that level of detail really paid off in the final image. It felt like it took the general idea I had in mind and sharpened it into a high-definition reality, whereas the first attempt was more of a broad interpretation.
